The candidate should follow the following guidelines while preparing the manuscript:

The text of the manuscript should be upto 3000 words (excluding Abstract, References and Tables) and divided into sections with the headings: Abstract, Keywords, Introduction, Materials and Methods, Results, Discussion, Conclusion and References.

1. **Title** - A good title should be short, accurate and concise. It should not exceed 50 characters.
2. **Abstract** - The manuscript should have a structured abstract of 250 words, representing an accurate summary of the article.
3. **Keywords** - Three or more keywords should be provided.
4. **Introduction** - It should include the rationale, brief review of relevant literature and objectives of the study in about 75-100 words.
5. **Materials and Methods** - Describe all the procedures that were used to achieve the objectives and justify the study design including any technique(s) and procedure(s) used. These include study setting; selection of samples; inclusion/ exclusion criteria; study design; intervention; selection of tools; brief of procedures; outcome assessment; data collection; statistical techniques & data analysis; ethical issues, if any.
6. **Results** - Present your results in a logical sequence through the text, tables and illustrations, giving the important findings.
7. **Discussion** - Discuss the results and do not repeat them. Compare your findings with those of other related studies whether in agreement or disagreement. Strengths and limitations of the study should be discussed.
8. **Conclusion** – Consolidated findings, their implications and recommendations for future research should be mentioned.
9. **References** – Appropriate references from recently published journals/literature supporting the research study should be provided. There are many styles that can be used for referencing. In bio-medical publications, Vancouver referencing style and the Harvard citation style are commonly used. However, Vancouver referencing style is preferred.
